

PREVENT™ BARRIER WOUND CONTACT LAYER

CLEARCHOICE
THERAPEUTICS

ELEVATE WOUND CARE WITH INNOVATION DESIGNED FOR ENHANCED HEALING AND PATIENT COMFORT.

The PREVENT Barrier Wound Contact Layer is an innovative wound contact layer with multiple uses. Designed with a unique honeycomb geometry, this thin, flexible, and non-adherent layer provides visibility to the wound bed, and helps minimize tissue adhesion, improving patient comfort. Available in multiple sizes, the PREVENT Barrier can be tailored to fit various wound sizes, providing a compelling alternative to traditional wound contact layers.

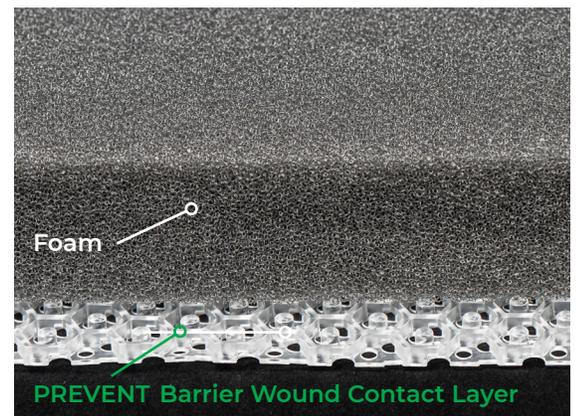

Why PREVENT?

- Clarity allows visualization
- No tissue ingrowth
- Extended wear
- No healthy tissue removal
- Less painful dressing changes
- May prevent bacterial overgrowth
- Eliminates malodorous dressings
- No collapse under negative pressure

INNOVATIVE TECHNOLOGY

HONEYCOMB DESIGN: Unlike traditional foam dressings, the PREVENT's unique geometry promotes efficient fluid distribution, even under compression, for wound drainage.

CLEAR & THIN PROFILE: Clarity provides wound visibility, and the thin profile reduces storage needs by up to 79%.
